REVIEWER INDEX

to Volume 103, January–April, 1983

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 103.

The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant; we must make sure the presentation is accurate, unambiguous and yet readable. For this, we depend heavily on our reviewers, who perform this indispensable service without reward. The quality of the journal can be no better than the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

ADAMS, G. M. W.
ADAMS, J.
ANDERSON, J. B.
ANDERSON, W. W.
ASMUSSEN, M.
AVERY, P. J.

BELOTE, J.
BERG, D.
BIDDLE, F. G.
BIRCHLER, J. A.
BIRD, R.
BIRKY, C. W.
BONNER, J.
BOSWELL, R.
BYRNE, B. J.

CAMPBELL, A.
CAVENER, D.
CHAMPE, S. P.
CLINE, T.
COCHRANE, B.

SUBJECT INDEX

to Volume 103, January–April 1983

additive effect of alleles, 149
allozyme effects on flight, 725
allozymes, 675
D-amino acid oxidase, null allele, 277
amylase, 675
antigen, cell surface, 483
Aspergillus nidulans, 409

bacteriophage lambda, 5, 605
bacteriophage T4, 353
behavioral genetics, 43

Caulobacter crescentus, plasmid replication, 593
cell viability in female germ line, 235
centromere mapping, 771
charge-state model, test, 741
chemostat, 581
Chlamydomonas monoica, homothallic, 429
chloroplasts, evolutionary theory, population genetic theory, 513
chromatogram, two-dimensional, 313
chromosome arm conservation, 75
chromosome rearrangements, yeast, 367
chromosomes, giant polytene, 465
cleft palate, 263
clonal analysis of oogenesis, 235
ColE1 in *Caulobacter crescentus*, 593
Colias, 691, 725
colonizations, Hawaiian Drosophila, 465
competition, intraspecific, 335
complementation analysis, Chlamydomonas, 429
conditional lethal genes, 153
covariance structure, 495
cross-reacting material, 649

DDT, 447
density regulated selection, 335
dermatoglyphics, 495
development, mammalian, hormonal influence, 263
developmental interactions, 633
diet, effects on fitness, 65
disomic inheritance, 753
dispersal of LSP-1 genes in Drosophila, 75
divergence, estimation of DNA, 287
DNA polymerase, 353
dosage compensation, 649
Drosophila, 649
Drosophila, Hawaiian, 465
Drosophila hydei, 197
Drosophila melanogaster, 93, 219, 235, 447, 617, 633, 659
Drosophila pseudoobscura, 675
Drosophilia species, 75
duplicate gene expression, 753

electrophoresis, 753
Escherichi coli, 581, 605
eukaryotes, 149
evolution, 675
evolution, Hawaiian Drosophila, 465

factor analysis, confirmatory, 495
finger prints, 495
fitness components, PGM, 65
fitness components, prediction, 725
fitness criteria, biochemical, 691
flavonoid, 313
flour beetle, *Tribolium castaneum*, 65
founder events, Hawaiian Drosophila, 465
frameshift, suppressors, 23, 31
frameshift mutation, 353
frequency dependence, 335

α-galactosidase variation, 785
gamma-ray mutagenesis, 109, 125
gene, functional organization, 197
gene action, time, 633
gene mapping, 797
gene organization, 617
gene regulation, 675
genotypic variance, 149
α-globin genes, 143
glucocorticoid-induced cleft palate, 263
glucose-6-phosphate dehydrogenase, 447
glycolysis, polymorphism, 691, 725
gynogenesis, 771

H-2, 263
half-siblings, 495
heat sensitivity, non-Mendelian, 93
heteroduplex formation, 5
heterozygosity, 149
heterozygote advantage, 143
heterozygote selection, 149
histocompatibility complex, major, H-2, 263
HPRT variation, 785
humans, 287

hybrid DNA and crossing over, 161
hybrid sterility, 557
Hyla versicolor, 753

inheritance, temperature compensation, 93
insertion sequence, 581
interaction, 197
interference, 771
inversions, 545
inversions, paracentric, 465
isozymes, 753

ladder-rung model, test, 741
lambda recombination, 5
larval serum protein, *in situ* locations, 75
lethal mutations, 617
lethals, viability of germ line, 235
linkage disequilibrium, 545
linkage modification, 323
lymphocytes, cytotoxic, 483

male fertility, 219
male phenotypes, 43
man, 495
markers, chromosome, 313
maternal effects, 495, 633
maternal inheritance, 483
maternal-zygotic lethal interactions, 633
mating behavior, 43
mitochondria, evolutionary theory, population genetic theory, 513
mitochondrial DNA, 287
mitochondrial mapping, suppressor mutation, *Aspergillus nidulans*, 409
models for recombination, 161
models of trioecy, 529
modifier theory, 323
mouse, 137, 263, 277, 483, 785, 797
Mta, 483
multivariate analysis, 495
mutagenesis in zebrafish, 109, 125
mutant, 277
mutators and antimutators, 353

NADP enzymes, 649
natural selection, 581
negative interference in bacteriophage lambda, 5
nematode, *Caenorhabditis elegans*, 43
nonhomology, effects on lambda recombination, 5
nonrandom mating, 323
notch locus alleles, 197
nucleotide sequences, 287
null alleles, 753

Okazaki initiation, fidelity, 353
oogenesis, genetic requirements in, 235
organelles, evolutionary theory, population genetic theory, 513

Paramecium tetraurelia, 153
partial selfing, 323
peptidase C, 249
phosphoglucomutase locus, 65
6-phosphogluconate dehydrogenase, 447
phosphoglucose isomerase, 691, 725
plasmid replication in *Caulobacter*, 593
plasmids, 605
polymorphisms, sex, 529
polyploidy, 753
population genetics, 287
potassium-sensitive genes, 153
premating isolation, 557

Rana pipiens, 249
random drift, 545
recessive lethals, induced, 109, 125
recombination, 605
recombination, bacteriophage lambda, 5
recombination, evolution, 323
recombination in Sordaria, 161
reproductive isolation, 557
RNA (tRNA), 389
RP4 in *Caulobacter crescentus*, 593

Saccharomyces cerevisiae, 367, 389
Salmonella typhimurium, 23, 31
segregation distorter, deletions, 659
selection, 675
selection at allozyme loci, 447
Sex-lethal, flanking vital genes, 617
sex linkage, 249
sex polymoprhisms, 529
sexual dimorphism, 43
sexual reproduction, *C. monoica* mutants, 429
Sordaria brevicollis, 161
speciation, models, speed, 557
specific-locus mutagenesis, 109, 125
spermatogenesis, 219
Stern, Curt, 1
steroid sulfatase in XX and XO mice, 137
superoxide dismutase, 249
suppression, intergenic, 153
suppressor, frameshift, 23, 31
suppressor, transcription termination, yeast, 367
suppressor, informational, 389

temperature-sensitive alleles, 197
teratoma, ovarian, 797

tetrasomic inheritance, 753
Tn*5*, 581
transcription termination mutants, yeast, 367
translation in eucaryotes, 389
transposon, 581, 605
transposons and *Caulobacter* plasmid transfer, 593
trioecy, genetic models, 529
Triticum aestivum L. em. Thell., 313
tRNA, mutants, 23, 31
trout, 771
twins, monozygotic, 495

Wahlund effect, 691
wheat, 313

X chromosome, region 6E1-7B1, 617
X chromosome linkage, 785
X-inactivation, 137

Y chromosome, 219

zebrafish, mutagenesis, 109, 125
zeste-white mutant maternal effects, 633
zygote maturation, Chlamydomonas, 429
